

To Whom it may concern.

Company Cards Ltd. located in Sutton St.Helens Merseyside UK have been manufacturing high quality plastic card products for a number of years.

Our production process is based on utilizing HP Digital printing presses combined with card body production equipment and personalization activities.

The key to the strength of our own business has been to provide a high quality product, often demanding short lead times in a continuous and uninterrupted manner.

In relation to the card body equipment we are pleased to provide a reference for Oasys Technology Ltd. who has worked with us since the set up of our business.

In our own production process we utilize Oasys lamination, punching and mini card production machines and our experience of Oasys has been that the machines are proven to be reliable and consistent and that the after sales service and support is one of the best that we have encountered.

Should you have any queries or concerns in relation to the performance of Oasys or would require further information on our organisation please do not hesitate to contact us.

Yours truly

Tim Scott  
Managing Director.
