

Dear Sirs,

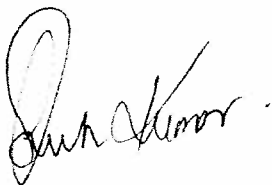

TO WHOM IT MAY CONCERN

I am providing this letter to company Oasys Technologies Ltd in the UK as a point of reference for their card body production equipment.

VCT is a global player in the plastic card market having manufacturing facilities in several continents. Typically working 24/7 our demands are consistent, high quality card output on timely deliveries. A number of our plants utilize a significant range of Oasys high speed tapelaying, collation and twinstack lamination machines and card punching machinery for bank card and gift card production.

I am pleased to advise that Oasys has performed to our expectations in these areas and that we find that both their machinery and support services to be first class.

If you need to discuss this in the future, please feel free to contact me.
