

TO WHOM IT MAY CONCERN

We hereby confirm that company Security Plastics manufactures high quality Visa/Mastercard Gold and Silver Mifare combi and standard RF Mifare Card products utilising an Oasys Twinstack Laminator. The laminator that we are using is the standard 12 daylight machine and we have manufactured in the order of 2 to 3 million cards of Mifare combi and standard RF Mifare product type.

We can confirm that the visual results, using the Oasys machine, are excellent and that there is no visible trace of the contactless card antennae on the card surface.

I can also confirm that Security Plastics has not undertaken any alterations to the standard Oasys lamination machinery to achieve these results .

If you have an queries or concerns in relation to this matter, please contact me by return.

Yours sincerely

ROLF JUNKER
TECHNICAL MANAGER
