

To whom it may concern...

Canadian Bank Note Company, Limited is a high quality manufacturer of Secure ID documents, providing such products on an International basis.

As part of our manufacturing process we require sheets of material to be precisely and consistently guillotined to specific formats and sizes.

In this regard I am pleased to confirm that we use an Oasys Double Guillotine ODG unit. We have operated this unit for a number of years and are very satisfied with the high quality performance of this machine which meets all our expectations for output volume, consistency / reliability and key production criteria.

If you have any queries on this letter you may contact the undersigned.
